

BLOG APP

Post.js

```
class Post{
  constructor(id, title, body){
    this.id =id;
    this.title = title;
    this.body = body;
  }
}
export default Post
```

Posts.js

```
import React, { Component } from 'react';

class Posts extends Component {
  constructor(props) {
    super(props);

    this.state = {
      posts: []
    };
  }

  loadPosts() {
    fetch('https://jsonplaceholder.typicode.com/posts')
      .then(response => response.json())
      .then(data => {
        this.setState({
          posts: data
        });
      })
      .catch(error => {
        console.log(error);
      });
  }
}
```

```

    }

    componentDidMount() {
        this.loadPosts();
    }

    componentDidCatch(error, info) {
        alert(error);
    }

    render() {
        const { posts } = this.state;
        return (
            <div>
                {posts.map(post => (
                    <div key={post.id}>
                        <h2>{post.title}</h2>
                        <p>{post.body}</p>
                    </div>
                ))}
            </div>
        );
    }
}

export default Posts;

```

App.js

```

import Posts from './Posts';
import './App.css';

function App() {
    return (
        <div className="App">
            <Posts />
        </div>
    );
}

export default App;

```

Output:
