

Exercise3: Assertions in JUnit

Since we already have Calculator.java and CalculatorTest.java from Exercise1. So we will just add this AssertionTest.java file in our test folder and then run this file to test.

AssertionTest.java

```
package org.example;

import org.junit.jupiter.api.Test;

import static org.junit.jupiter.api.Assertions.*;

public class AssertionTest {

    @Test
    void testAssertions() {

        assertEquals(5, 2 + 3);

        assertTrue(5 > 3);

        assertFalse(5 < 3);

        assertNull(null);

        assertNotNull(new Object());
    }
}
```

Output:
